

Petition German Bundestag (No. 10681): Federal highways - Building freeze for the so-called Hochmoselübergang

I support the demand for an immediate building freeze of the section of the **B50neu** from motorway junction Wittlich to Kommen, including the **High Mosel Bridge (Hochmoselübergang)**. The costs and the immeasurable damage are not accompanied by adequate advantages. By now there are faster and shorter European highways which fulfil the original task of this road.
